The a4wolke bundle*

Stefan Berthold stefan.berthold@kau.se

September 16, 2013

1 Introduction

The a4wolke bundle provides LATEX classes for creating documents with a layout similar to the one used in the A4Cloud project. The latest version can be obtained from

http://github.com/ZjMNZHgG5jMXw/a4wolke .

2 Usage

This template can be found in a4template.tex. The document declaration starts with defining the meta data.

```
1 (*template)
2 \documentclass{a4wolke}
3 \usepackage[scaled=0.92]{helvet}
                 = Document title
4 \neq 1
      , number
                       = MS:X-1.1
      , workpackage
                      = WP:X-1
6
      , version
                       = 0.1
      , organisation = Partner
      , dissemination = CO
      , contractdate = dd/mm/yyyy
11
      , delivery
                       = dd/mm/yyyy
       , status
                       = template
12
13 }
```

An editor can be declared by using the macro \editor. More editors can be added by repeatedly declaring one editor.

```
14 \cdot 14 \cdot 15 , affiliation = editor's affiliation 16
```

A contributor can be declared by using the macro \contributor. More contributors can be added by repeatedly declaring one contributor.

```
17 \contributor{ name = author's name
18 , affiliation = author's affiliation
19 }
```

^{*}This document corresponds to a 4wolke v1.0, dated 2013/09/12.

A reviewer can be declared by using the macro \reviewer. More reviewers can be added by repeatedly declaring one reviewer.

```
20 \reviewer{ name = reviewer's name
21 , affiliation = reviewer's affiliation
22 }
```

A revision can be declared by using the macro \revision. More revisions can be added by repeatedly declaring one revision.

```
23 \revision{ number = 0.1

24 , date = dd/mm/yyyy

25 , author = author

26 , affiliation = affiliation

27 , change = change description.

28 }
```

The document body starts with inserting the lists and tables of contributors, reviewers, revisions, and contents.

```
29 \begin{document}
30 \maketitle
31 \section*{Executive Summary}
32 \clearpage
33 \tableofcontents
The rest of the document may be written as any other IATEX article.
34 \section{Introduction}
35 \end{document}
36 \( / \template \)
```

3 Implementation

3.1 Class options and dependencies

Class options are neither parsed nor passed to the underlying article class. All macros are derived from the standard scrartcl class.

```
38 \ProcessOptions\relax
